Hiring Team / Engineering Leadership
Swiggy India

RE: Application for Senior Software Engineer (Java + React)

Dear Hiring Team at Swiggy India,

I am writing to express my strong interest in the Senior Software Engineer (Java + React) opening at Swiggy India. With ~3.2 years of specialized experience in Java, Spring Boot microservices, and modern React full-stack engineering, I focus on building resilient, high-throughput backend services and clean web architectures.

In my production engineering roles at Accenture and TCS Digital, I engineered scalable microservices handling concurrent workloads of 10,000+ active users. At TCS Digital, I architected RESTful endpoints, optimized relational queries in PostgreSQL, and integrated Redis caching to dramatically reduce database overhead. I emphasize strict type safety, comprehensive unit testing, and maintainable domain-driven design.

In the distributed systems domain, I built TradeX, an event-driven stock trading platform powered by Spring Boot, Apache Kafka event streams, Redis caching, and WebSockets for real-time market data dissemination. On the frontend, my work with React and TypeScript ensures high performance, clean state management, and intuitive user experiences.

Given Swiggy India's focus on Java, Kafka, Microservices, React, I am confident in my ability to hit the ground running. I hold a 30-day notice period and look forward to discussing how my background can support your engineering initiatives.

Sincerely,

Shubham Prakash

Full Stack & Backend Software Engineer
